

COURSE REPORT

Scrum Master Training Program

Name	Rohan Pandey	Roll No.	2400290110144
Branch	CS	Section	A

Course Duration: 10 Hours 57 Minutes

Platform: Infosys Springboard

Introduction

The Scrum Master Training Program provided a comprehensive understanding of the Scrum framework and the responsibilities of a Scrum Master in an Agile software development environment. The course focused on how Scrum teams plan, execute, monitor, and continuously improve their work through iterative development and collaboration.

Key Learnings

- Understanding the Agile mindset and the principles behind iterative and incremental software development.
- Understanding the Scrum framework, its principles, and how it is applied in real-world projects.
- Learning about the three major Scrum accountabilities: Product Owner, Scrum Master, and Developers.
- Understanding Scrum events such as Sprint Planning, Daily Scrum, Sprint Review, and Sprint Retrospective.
- Learning the importance of the Product Backlog, Sprint Backlog, and Increment.
- Understanding how to facilitate Scrum events and help teams remain focused on their Sprint goals.
- Learning how a Scrum Master acts as a facilitator, coach, servant leader, and impediment remover.
- Understanding techniques for identifying and resolving obstacles that affect team productivity.
- Learning the importance of transparency, inspection, and adaptation in Agile development.
- Understanding how teams can use feedback and retrospectives for continuous improvement.
- Developing an understanding of collaboration, communication, self-management, and cross-functional teamwork.

Outcome of the Course

After completing the course, I gained a strong foundational understanding of Scrum and Agile project management. I can now better understand how Agile teams organize their work, manage changing requirements, conduct iterative development, and continuously improve their processes. The knowledge gained from this course can be applied while working in software development teams, particularly in projects involving Agile methodologies, team coordination, Sprint planning, backlog

management, and continuous delivery. It also provides a foundation for taking greater responsibility in Agile teams and understanding the role of a Scrum Master.

Conclusion

The Scrum Master Training Program improved my understanding of Agile project management and collaborative software development. It helped me develop both theoretical knowledge and practical awareness of how Scrum can be used to deliver products efficiently while responding to changing requirements and stakeholder feedback.
